

Dear parents,

Wraysbury Primary School has taken advantage of an opportunity to be one of the schools participating in the Summer Maths Challenge, which we hope will develop our pupils' maths skills - without depriving them of their well-deserved break!

Just like learning a musical instrument or playing a sport, maths is a subject that requires practice to build the strong foundations needed to become fluent and move forward with confidence. This summer challenge, with its colourful progress chart and certificates, will help encourage pupils to put in that practice and, more importantly, make that practice fun!

The challenge is to complete 15 short maths practice sessions which are based on the National Curriculum for the school year your child has just completed. These 'little and often' sessions are perfectly crafted to sharpen maths skills without getting in the way of summer relaxation - and without keeping children at the screen for too long.

Our school has been given a unique code to enter onto the Komodo website so that you can access these practice sessions completely free of charge. Ours is:

**SLWRAYSBURY**

All you have to do is visit [komodomath.com/summer](https://komodomath.com/summer) or hold your iPhone camera over the QR code below, and enter the above code in the 'voucher code' field when you sign up on the page.

It's quick, it's free, it won't take too much time and we really believe that participating in this initiative will have tangible benefits for our pupils.

We look forward to hearing how you all got on!

*Hold your iPhone camera over this:*

Good luck and enjoy the challenge,

Alison Brech  
Maths Leader
